Our Goal

Create fantastic results without the worry of burning your lawn.

Our fertilizer is treated not coated, which helps to stabilize the urea in the soil making the nitrogen as effective as possible. This treatment inhibits urea from being converted into volatile ammonium, by inhibiting the free urease enzyme in the soil.

Treated With
Stabilized Nitrogen Technology
Apply in wet or dry conditions

Stabilized Nitrogen Technology
Apply in wet or dry conditions

Nitro Boost

46-0-0

Nitro Boost contains only stabilized urea nitrogen used for long lasting, deep green turf with superior visual qualities and ratings.

Our Urea Nitrogen Is Treated Not Coated

We treat our nitrogen with a urease inhibitor which stops nitrogen loss of urea due to volatility.

Urease is an enzyme present in soil and plant residue (grass clippings or mulch). This will break down the urea into ammonia and carbon dioxide. The ammonia will be released into the atmosphere.

Our product will virtually stop this process enhancing the ability of the nitrogen to use natural soil chemistry to extend nitrogen availability.

Total Nitrogen (N) 21%
21% from Stabilized Nitrogen
Available Phosphate (P₂O₅) 17%
Soluble Potash (K₂O) 6%
Sulphur (S) 7%
Chlorine (Cl) 4%

Treated With
Stabilized Nitrogen Technology
Apply in wet or dry conditions

Rain

21-17-6

Rain, blended for root development, drought and mold resistance, and over all health for new and established lawns. Also contains stabilized nitrogen for a deeper green color.

CFIA Approved Labels

46 Lawn & Garden Product labels meet all the criteria set by the Canadian Food Inspection Agency.

PRODUCT COMPARISON

Slow-Release Products

Slow-release deteriorates and remains on the lawn surface for up to 45 days.

Slow-release products are long-chain urea, they are coated and cost more to produce.

Environmental factors (sun, rain, etc.) determine how much actual Nitrogen is released into the soil regardless if the plant needs it or not.

In the first three days after application up to 30% of unstable nitrogen is lost due to volatilization.

Stabilized Nitrogen Technology

Stabilized nitrogen does not require microbial breakdown of chemical bonds or a coating to accomplish this longevity.

Absorbs naturally into the soil then becomes available to the roots as the plant needs it.

Improves efficiency and allows for lower application rates where the turf will grow more uniformly without surge growth.

Delivers more nitrogen per unit for significantly less.
